

## ● Environmental Problem :

**2.4 billion people worldwide live in water-stressed countries. A problem that is intensified by climate change.**

**As a result, building water based sanitation systems in a country experiencing water scarcity is extremely challenging.**

## Social Problem:

**1.5 million Namibians practise open defecation.**

1.

Local artisans from the community build the eco-toilets.

2.

Highly trained & certified sanitation workers service the eco-toilets on a weekly basis.

3.

On a regular & timely basis we safely collect the toilet waste in the composting drums.

4.

Finally, the waste is transformed into biochar or by composting into organic fertilizer.
